

FOREWORD BY THE CTO

Eurogrip tyres are backed by over 3 decades of bike tyre design and manufacturing expertise. At our state-of-art research centre, a team of over 75 specialists, research the best materials, designs, technologies and processes. We take a global perspective while developing these technologies and apply them in our products.

Combining our R&D team's in-depth knowledge of Indian conditions with expertise from international specialists, we develop advanced tyre models and superior tyre designs.

Eurogrip uses the world's most advanced technologies and best-in-class manufacturing techniques to create tyres for an ever-evolving global market. Every product we make comes with the Eurogrip quality promise.

Our products are put through a million cycles of durability tests meeting global certification standards and tested by experts and top-class racers on international tracks.

With a passion for perfection and commitment to excellence, we deliver a fulfilling riding experience to our customers in India and abroad.

Sivaramakrishnan. V
Chief Technology Officer

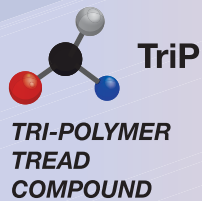

EUROGRIP TECHNOLOGY AND BENEFITS

EUROGRIP TECHNOLOGY

The first compound layer that is in contact with the road delivers superior mileage and grip performance. The second compound layer provides excellent bonding with the reinforcement structure.

Best of both worlds: Superior Mileage and Grip performance with excellent Durability.

Advanced Tri-Polymer Technology Tread Compound with High Structure Carbon.

A tyre that is well-balanced, optimizing Grip, Mileage and Durability.

Computer Designed Deep Tread Pattern with high tread rubber volume.

A tyre that Lasts Long and delivers High Mileage.

Specially developed Nylon Reinforcement Bonding System for high adhesion of rubber and nylon.

A tyre that Lasts Long. Remains Durable and Safe even after a lifetime of use.

TECHNOLOGY FEATURES

TECHNOLOGY BENEFITS

EUROGRIP TECHNOLOGY

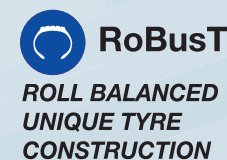

The Tread Pattern is designed for even footprint pressure distribution and stress-free groove geometry using high-end computer-aided FEA techniques.

Tyres with even wear and excellent Grip in dry and wet conditions.

A special layer of rubber compound with excellent air sealing capability.

Retains Air Pressure for longer periods of time, enabling superior ride comfort.

Tyre construction design optimized for superior and safe cornering.

A safe riding experience at high speeds.

TECHNOLOGY FEATURES

TECHNOLOGY BENEFITS

SEGMENT DEFINITION

Segment Name	Road Category	Weather Conditions	Tyre Persona	Rider's Profile
Radials	 <i>Radials</i>	 <i>All Weather</i>	Tyres that deliver best-in-class high speed performance and control.	Riders who enjoy high speed, sporty rides.
Urban Electric	 <i>Urban Electric</i>	 <i>All Weather</i>	Low rolling resistance tyres that consumes energy in the most efficient manner	For those who love to ride in an environment-friendly way, contributing towards a greener planet in more ways than one
Explorer	 <i>Off-Road</i>	 <i>All Weather</i>	Tyres that offer exceptional control even in the most arduous off-road terrains, enhancing durability, stability and comfort.	Riders who yearn for road adventures, for whom journeys matter more than the destinations.
Crossover	 <i>Mixed Road</i>	 <i>All Weather</i>	Get the best out of your bike. Whatever the terrain, whatever the weather.	Riders who enjoy a mix of both on-road and off-road terrains. Be it unpaved countryside roads, or city roads with perils.
Urban	 <i>On-Road</i>	 <i>All Weather</i>	Designed for the classic city commuter. Offers the agility and stability to handle the daily uncertainties of our city roads.	The one who requires frequent manoeuvring and braking in city traffic.
Street speed	 <i>On-Road</i>	 <i>Dry Weather</i>	A sporty tread, built to perform in dry conditions. Optimised for grip and long-lasting durability.	For the one with ample leisure at hand, to ride in fun-filled company. Always in safe zones - well-paved roads, comfortable curves, and little traffic.

RADIALS
REDISCOVERED

ROADHOUND

Available Sizes:

ROADHOUND

Front

120/70 ZR17 (58W) TL

Rear

160/60 ZR17 (69W) TL

180/55 ZR17 (73W) TL

Radial tyres for superbikes with excellent grip, handling and mileage

- Zero degree steel belt for precise handling
- Silica compound to enhance wet grip
- Advanced tread geometry for boosting stability and comfort

**ZERO DEGREE
STEEL RADIALS**

**TESTED FOR SPEEDS
OVER 270 KMPH**

**QUADRA ZONE CONSTRUCTION
DELIVERED BY QUADRA COMPOUND**

Bike Applications:

Benelli: TRK 502, TNT300, Leancino 500, TNT 600i

BMW: R nineT, R 1200 R, R NineT Racer, R 1200 RT

CFMOTO: 650NK, 650MT, 650GT

Ducati: Monster 821, Hypermotard 939, Monster 797, SuperSport,

Harley Davidson: Street ROD

Honda: CBR 650F

Kawasaki: Z650, Versys 650, Ninja 650, Versys 1000,
ZX-6R, Z900

KTM: 790 Duke

MotoGuzzi: Griso 1200 8V SE

MV Agusta: Brutale 800/800RR, F3 800

Triumph: Thurxton R, Daytona R, Street Triple S, Daytona,
Street Triple RS

PROTORQ EXTREME

Steel belted Radial for extremely sporty experience along with grip and comfort

- Zero degree steel belt for precise control at high speeds
- Strong casing structure for wider contact patch which gives higher grip, traction and braking.
- Extended grooves for better grip while cornering

**ZERO DEGREE
STEEL RADIALS**

**TESTED FOR SPEEDS
UPTO 270 KMPH**

Bike Applications:

Bajaj: Dominor 400, Pulsar, Kawasaki Ninja

Benelli: Benelli TNT, Benelli TNT 25, Benelli TNT R

BMW: K1600 GTL

Ducati: Ducati monster 821 dark, AJP Supersmoto, GALP 50 R

Hero: Xtreme

Honda: CBR, CBR250 R, Caliber, CBF, CBF Stunner, CBR 150 R, CB HORNET 160R

TYRE CONSTRUCTION

The basis of every tyre's life and performance lies in its construction. Choosing the correct specification for your needs significantly improves tyre life and your vehicle's performance. Eurogrip offers a wide range of technologies to cater to different needs and applications.

BIAS TECHNOLOGY

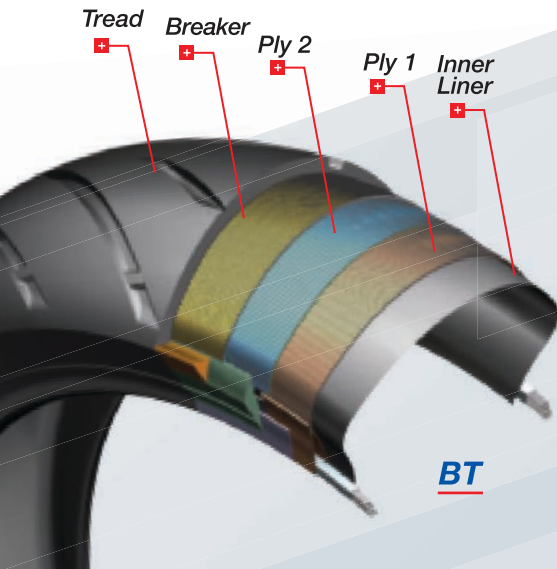

BIAS TYRE: Also known as the conventional or x-ply tyre. The structure of this tyre consists of a carcass where two or more layers are overlapped, depending on the different speed and load specifications. Each layer is made of textile cords coated into rubber and the overlap angle is designed to equip the tyre with the required dynamic characteristics.

BIAS

BIAS-BELTED TECHNOLOGY

BIAS-BELTED TYRE: This structure is comprised of a conventional carcass as in a bias tyre, with additional layer(s) of belt, also called breaker(s). The belts are used to reduce the dynamic deformation caused by centrifugal forces and thus enable better dynamic performance. The carcass gives the tyre its stiffness and load carrying capacity.

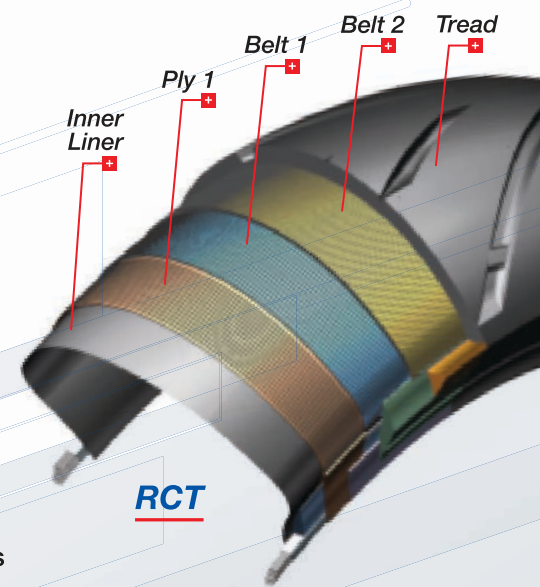

BT

RADIAL X-BELT TECHNOLOGY

RADIAL CROSS-BELT TYRE:

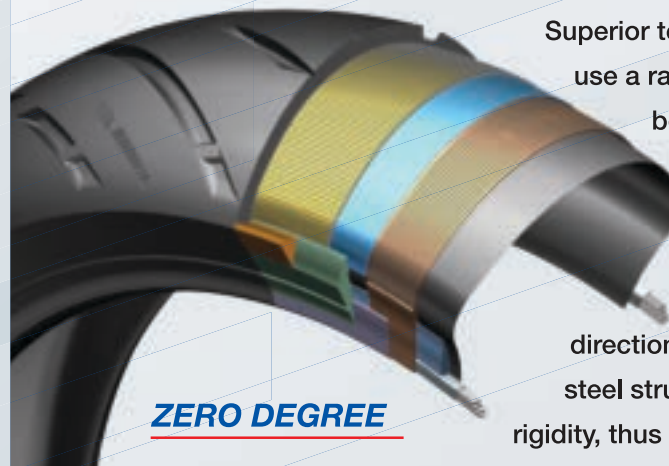

This tyre features a radial carcass, which means that its cords are wrapped radially around the tyre from one bead to the other. Belts at the tread, with reinforcements running at an angle provide high rigidity to the tyre crown. This construction allows tyres to have low aspect ratios, providing advantages in terms of high-speed performance, comfort and cornering stability.

RCT

RADIAL 0° BELT TECHNOLOGY

Superior technology enables Eurogrip to use a radial carcass and a single layer belt made of steel for both front and rear tyres. The belt is wound circumferentially around the carcass at an angle close to 0° to the direction of rotation. The high strength steel structure provides extremely high rigidity, thus delivering superior handling at high speed. The ability of this technology to give variable pitch winding to the reinforcements enables stiffness distribution from centre to shoulder.
